

Hackathon Problem Statements

1. Hyperlocal Disaster Micro-Alert System Using Nano-Sensors & AI

This problem involves developing a solution related to 'Hyperlocal Disaster Micro-Alert System Using Nano-Sensors & AI'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

2. AI-Kirana: Intelligent Assistant for Small Rural Retailers

This problem involves developing a solution related to 'AI-Kirana: Intelligent Assistant for Small Rural Retailers'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

3. 3D Audio Navigation System for the Visually Impaired

This problem involves developing a solution related to '3D Audio Navigation System for the Visually Impaired'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

4. Waste-to-Wealth Smart Dustbin Using AI + IoT

This problem involves developing a solution related to 'Waste-to-Wealth Smart Dustbin Using AI + IoT'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

5. Design an end-to-end, real-time asset tracking system

This problem involves developing a solution related to 'Design an end-to-end, real-time asset tracking system'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

6. Health & Wellness Reminder Bot

This problem involves developing a solution related to 'Health & Wellness Reminder Bot'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It

encourages participants to think creatively about how to bring meaningful impact through this idea.

7. Blood Donation & Emergency Helper App

This problem involves developing a solution related to 'Blood Donation & Emergency Helper App'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

8. Lost & Found Item Management System

This problem involves developing a solution related to 'Lost & Found Item Management System'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

9. Sleep Optimization App Using Sound + Pose Recognition

This problem involves developing a solution related to 'Sleep Optimization App Using Sound + Pose Recognition'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

10. Virtual Heritage & Culture Discovery App

This problem involves developing a solution related to 'Virtual Heritage & Culture Discovery App'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

11. Civic Complaint Tracker

This problem involves developing a solution related to 'Civic Complaint Tracker'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

12. Medicine Availability Finder

This problem involves developing a solution related to 'Medicine Availability Finder'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It

encourages participants to think creatively about how to bring meaningful impact through this idea.

13. Public Transport Delay Reporter

This problem involves developing a solution related to 'Public Transport Delay Reporter'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

14. Water Supply Timing & Shortage Alerts

This problem involves developing a solution related to 'Water Supply Timing & Shortage Alerts'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

15. Missing Persons & Lost Documents Portal

This problem involves developing a solution related to 'Missing Persons & Lost Documents Portal'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

16. Gas Leakage Alert System (Hardware)

This problem involves developing a solution related to 'Gas Leakage Alert System (Hardware)'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

17. AI-based tool that converts class lectures into notes automatic ally

This problem involves developing a solution related to 'AI-based tool that converts class lectures into notes automatic ally'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

18. Smart pill reminder with analytics for doctors.

This problem involves developing a solution related to 'Smart pill reminder with analytics for doctors.'. The goal is to address practical challenges by creating an innovative system or tool.

The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

19. Fitness app that gamifies exercise progress

This problem involves developing a solution related to 'Fitness app that gamifies exercise progress'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

20. Event management app for college fests.

This problem involves developing a solution related to 'Event management app for college fests.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

21. Expense tracker for students with savings suggestions.

This problem involves developing a solution related to 'Expense tracker for students with savings suggestions.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

22. AI System to Predict Crowd Disasters (Stampedes) at Festivals & Events

This problem involves developing a solution related to 'AI System to Predict Crowd Disasters (Stampedes) at Festivals & Events'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

23. AI-Based Mental Health Companion for Students

This problem involves developing a solution related to 'AI-Based Mental Health Companion for Students'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

24. Food Allergy Early Detector” for Cafeterias Using Computer Vision

This problem involves developing a solution related to 'Food Allergy Early Detector' for Cafeterias Using Computer Vision'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

25. Software to Understand Emotion Behind Text Conversations

This problem involves developing a solution related to 'Software to Understand Emotion Behind Text Conversations'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

26. AI Model That Converts WhatsApp Voice Notes into Actionable To-Do Lists

This problem involves developing a solution related to 'AI Model That Converts WhatsApp Voice Notes into Actionable To-Do Lists'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

27. Smart Calendar That Auto-Fills Your Schedule Based on Habits

This problem involves developing a solution related to 'Smart Calendar That Auto-Fills Your Schedule Based on Habits'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

28. Detection of AI based content or deepfake to detect fraud - cybersecurity

This problem involves developing a solution related to 'Detection of AI based content or deepfake to detect fraud - cybersecurity'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

29. Smart medical assistant for elderly people - Health

This problem involves developing a solution related to 'Smart medical assistant for elderly people - Health'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

30. Friendly and gamified interactive educational Platform for Students - Education

This problem involves developing a solution related to 'Friendly and gamified interactive educational Platform for Students - Education'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

31. Crop yield estimation and disease detection platform for farmers using AI - agriculture

This problem involves developing a solution related to 'Crop yield estimation and disease detection platform for farmers using AI - agriculture'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

32. Heavy traffic management system for urban areas – Transportation

This problem involves developing a solution related to 'Heavy traffic management system for urban areas – Transportation'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

33. Adaptive Quiet-Zone Finder for Students

This problem involves developing a solution related to 'Adaptive Quiet-Zone Finder for Students'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

34. Skill-Swap Marketplace for College Students

This problem involves developing a solution related to 'Skill-Swap Marketplace for College Students'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

35. Personalized Skill Growth Roadmap Generator

This problem involves developing a solution related to 'Personalized Skill Growth Roadmap Generator'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

36. Campus Energy Consumption Dashboard

This problem involves developing a solution related to 'Campus Energy Consumption Dashboard'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

37. Anonymous Campus Feedback & Grievance Portal

This problem involves developing a solution related to 'Anonymous Campus Feedback & Grievance Portal'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

38. Plastic Quality Scanner

This problem involves developing a solution related to 'Plastic Quality Scanner'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

39. Autonomous Queue Resolver for Government Offices

This problem involves developing a solution related to 'Autonomous Queue Resolver for Government Offices'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

40. Urban Temperature Bubble Mapper (Heat Islands Detection)

This problem involves developing a solution related to 'Urban Temperature Bubble Mapper (Heat Islands Detection)'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

41. Real-Time AI Debate Buddy (Opposition Generator)

This problem involves developing a solution related to 'Real-Time AI Debate Buddy (Opposition Generator)'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

42. Mind-Map Auto Generator From Conversations

This project listens to conversations or lectures and auto-generates a structured mind-map in real time, displaying ideas, connections, and follow-up questions. Teams should design topic extraction, node clustering, and an intuitive visual interface that merges similar ideas, creates summaries, and exports results for note-taking or action items.

43. Safety App Development – Digital HSE System: A mobile app for digitizing safety reporting, near-miss incidents, warnings, trainings, and analytics.

This problem involves developing a solution related to 'Safety App Development – Digital HSE System: A mobile app for digitizing safety reporting, near-miss incidents, warnings, trainings, and analytics.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

44. IoT-Based Air Quality Monitoring & Alert System: Multi-sensor IoT nodes measuring pollutants with cloud dashboards and real-time health alerts.

This problem involves developing a solution related to 'IoT-Based Air Quality Monitoring & Alert System: Multi-sensor IoT nodes measuring pollutants with cloud dashboards and real-time health alerts.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

45. AI-Driven Personalized Learning Assistant: An adaptive AI tutor that recommends personalized study content, tracks progress, and works offline.

This problem involves developing a solution related to 'AI-Driven Personalized Learning Assistant: An adaptive AI tutor that recommends personalized study content, tracks progress, and works offline.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

46. College Placement Tracker: A dashboard that tracks resume quality, test scores, certifications, interview readiness, and overall placement readiness score.

This problem involves developing a solution related to 'College Placement Tracker: A dashboard that tracks resume quality, test scores, certifications, interview readiness, and overall placement readiness score.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

47. AI-Driven Public Health Chatbot for Disease Awareness

This problem involves developing a solution related to 'AI-Driven Public Health Chatbot for Disease Awareness'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

48. AR-Based Cultural Heritage Preservation Platform

This problem involves developing a solution related to 'AR-Based Cultural Heritage Preservation Platform'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

49. Digital Mental Health and Psychological Support System for Students in Higher Education

This problem involves developing a solution related to 'Digital Mental Health and Psychological Support System for Students in Higher Education'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

50. Smart Crop Advisory System for Small and Marginal Farmers

This problem involves developing a solution related to 'Smart Crop Advisory System for Small and Marginal Farmers'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

51. Digital Platform for Centralized Alumni Data Management and Engagement

This problem involves developing a solution related to 'Digital Platform for Centralized Alumni Data Management and Engagement

52. Nearby Malls Product Hub for Rapid Delivery

This problem involves developing a solution related to 'Nearby Malls Product Hub for Rapid Delivery'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

53. Connect Nearby Shops and Find Products

This problem involves developing a solution related to 'Connect Nearby Shops and Find Products'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

54. AI-Powered Real-Time Detection System for Autos, Vehicles, and Pedestrians

This problem involves developing a solution related to 'AI-Powered Real-Time Detection System for Autos, Vehicles, and Pedestrians'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

55. Career and Education Advisor AI

This problem involves developing a solution related to 'Career and Education Advisor AI'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

56. Reality Drift Detector (AI System That Spots Manipulated Real-World Scenes)

This problem involves developing a solution related to 'Reality Drift Detector (AI System That Spots Manipulated Real-World Scenes)'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

57. AI tool that learns endangered micro-dialects (not mainstream languages) from extremely small datasets and helps communities keep them alive with stories, audio, and games.

This problem involves developing a solution related to 'AI tool that learns endangered micro-dialects (not mainstream languages) from extremely small datasets and helps communities keep them alive with stories, audio, and games.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

58. Smart Accessibility Tool for Non-Visual Learners

This problem involves developing a solution related to 'Smart Accessibility Tool for Non-Visual Learners'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable

implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

59. AI for Hyper-Efficient Energy Management in Dorms/Labs

This problem involves developing a solution related to 'AI for Hyper-Efficient Energy Management in Dorms/Labs'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

60. Automated Scientific Literature Synthesis Engine

This problem involves developing a solution related to 'Automated Scientific Literature Synthesis Engine

61. To predict and prevent “last-minute” delivery failures by analyzing building layouts, entry restrictions, and past courier behavior.

This problem involves developing a solution related to 'To predict and prevent “last-minute” delivery failures by analyzing building layouts, entry restrictions, and past courier behavior.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

62. Generates real-time personalized analogies for complex topics based on a learner’s background, culture, and interests.

This problem involves developing a solution related to 'Generates real-time personalized analogies for complex topics based on a learner’s background, culture, and interests.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

63. System that identifies early signs of nutrient deficiencies using only non-invasive visual cues.

This problem involves developing a solution related to 'System that identifies early signs of nutrient deficiencies using only non-invasive visual cues.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

64. Privacy-Preserving Pet Tracker

This problem involves developing a solution related to 'Privacy-Preserving Pet Tracker'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

65. AI-Powered Personal Health Risk Regulator

This problem involves developing a solution related to 'AI-Powered Personal Health Risk Regulator'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

66. A Device for Tracking Indoor Air Pollution

This problem involves developing a solution related to 'A Device for Tracking Indoor Air Pollution'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

67. AI-Based Climate Change Pattern Detector

This problem involves developing a solution related to 'AI-Based Climate Change Pattern Detector'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

68. Smart Fire Detection and Quick Alert System

This problem involves developing a solution related to 'Smart Fire Detection and Quick Alert System'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

69. Smart Water Usage & Leakage Detection System

This problem involves developing a solution related to 'Smart Water Usage & Leakage Detection System'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

70. Personal Carbon Twin for Daily Emission Tracking

This problem involves developing a solution related to 'Personal Carbon Twin for Daily Emission Tracking

71. MicroLoan Risk Predictor for Small Vendors Using Digital Behaviour

This problem involves developing a solution related to 'MicroLoan Risk Predictor for Small Vendors Using Digital Behaviour'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

72. Climate-Resilient Farming Advisor with Soil Digital Twin

This problem involves developing a solution related to 'Climate-Resilient Farming Advisor with Soil Digital Twin'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

73. Smart Hospital Resource & Bed Availability Tracker

This problem involves developing a solution related to 'Smart Hospital Resource & Bed Availability Tracker'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

74. Intelligent Noise Pollution Map for Cities

This problem involves developing a solution related to 'Intelligent Noise Pollution Map for Cities'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

75. Drone-Based Micro Delivery System for Intra-Campus Logistics

This problem involves developing a solution related to 'Drone-Based Micro Delivery System for Intra-Campus Logistics'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

76. Community Equipment Sharing & Booking System

This problem involves developing a solution related to 'Community Equipment Sharing & Booking System'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

77. Centralized Study Group & Collaboration Matcher

This problem involves developing a solution related to 'Centralized Study Group & Collaboration Matcher'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

78. Smart Hostel Laundry Tracking & Pickup Manager

This problem involves developing a solution related to 'Smart Hostel Laundry Tracking & Pickup Manager'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

79. AI-Powered Classroom Attention & Fatigue Analyzer (Non-Intrusive)

This problem involves developing a solution related to 'AI-Powered Classroom Attention & Fatigue Analyzer (Non-Intrusive)'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

80. AI-Driven Smart Document Compressor & Enhancer

This problem involves developing a solution related to 'AI-Driven Smart Document Compressor & Enhancer'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

81. AI-Based Traffic & Urban Growth Prediction Platform

This problem involves developing a solution related to 'AI-Based Traffic & Urban Growth Prediction Platform'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

82. Digital Twin of Student Academic Life.

This problem involves developing a solution related to 'Digital Twin of Student Academic Life.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

83. Smart Knowledge Marketplace with Authenticity Scoring.

This problem involves developing a solution related to 'Smart Knowledge Marketplace with Authenticity Scoring.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

84. AI-Based Academic Risk Prediction & Early Warning System.

This problem involves developing a solution related to 'AI-Based Academic Risk Prediction & Early Warning System.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

85. Smart Resume Screening & Bias-Free Shortlisting Tool

This problem involves developing a solution related to 'Smart Resume Screening & Bias-Free Shortlisting Tool'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

86. AI-Based Skill Gap Finder for Students

This problem involves developing a solution related to 'AI-Based Skill Gap Finder for Students'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

87. AI-Powered Time-Waste Pattern Detector for Students

This problem involves developing a solution related to 'AI-Powered Time-Waste Pattern Detector for Students'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

88. AI Smart Water Leakage & Overuse Detector for Hostels

This problem involves developing a solution related to 'AI Smart Water Leakage & Overuse Detector for Hostels'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

89. AI-Based Personalized Class Seating Suggestion System

This problem involves developing a solution related to 'AI-Based Personalized Class Seating Suggestion System'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

90. AI-Powered Digital Cleanliness Inspector

This problem involves developing a solution related to 'AI-Powered Digital Cleanliness Inspector'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

91. Mentor Connect- Create a platform where candidates can connect with mentors based on availability.

This problem involves developing a solution related to 'Mentor Connect- Create a platform where candidates can connect with mentors based on availability.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

92. Web-scraping tool... to search and report Critical Vulnerabilities.

This problem involves developing a solution related to 'Web-scraping tool... to search and report Critical Vulnerabilities.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

93. AI-Powered Student Assistance Chatbot for Department of Technical Education.

This problem involves developing a solution related to 'AI-Powered Student Assistance Chatbot for Department of Technical Education.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

94. Develop a Virtual Herbal Garden... showcasing medicinal plants used in AYUSH.

This problem involves developing a solution related to 'Develop a Virtual Herbal Garden... showcasing medicinal plants used in AYUSH.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

95. Automated System for Career Advancements of the Faculties of Higher Education.

This problem involves developing a solution related to 'Automated System for Career Advancements of the Faculties of Higher Education.'. The goal is to address practical challenges by creating an innovative system or tool. The project should offer clear functionality, user-oriented design, and scalable implementation. It encourages participants to think creatively about how to bring meaningful impact through this idea.

96. Smart Water Optimization & Irrigation Control Using IoT + Predictive AI

Design an IoT-powered irrigation device or network that tracks soil moisture, crop type, weather forecasts, and groundwater levels to predict the optimal watering schedule that maximizes yield and reduces wastage.

97. Immersive Cultural Heritage Reconstruction from Fragmented Inputs (Cultural Heritage + Tech)

Build a platform that reconstructs cultural monuments, artifacts, or practices using partial images, old documents, sketches, oral histories, and community submissions. The system should allow users to visualize “lost” heritage sites, explore 3D models, and contribute missing details. This protects intangible and tangible cultural heritage for future generations.

98. Smart Farming–Highway Synergy Network (Transportation + Farming + Sustainability)

Create a system that analyzes highways and expressway corridors to identify suitable roadside patches for micro-farming, solar farming, beekeeping, or hydroponic installations. The platform must check soil quality, noise impact, pollution exposure, and accessibility. This creates a dual-purpose infrastructure that supports both sustainable farming and transportation development.

99. Blockchain-Backed Seed Authenticity & Traceability Ledger (Blockchain + Farming)

Build a blockchain ledger that stores the complete lifecycle of seeds — from breeder → distributor → retailer → farmer. The platform must detect counterfeit seeds, track germination credibility, and maintain transparency in seed varieties. Each seed batch becomes a tamper-proof digital asset, ensuring trust, fairness, and high-yield planting

decisions.

100. Smart Public Transport Safety & Alert Network

Build an IoT + AI platform for buses/trains that monitors overcrowding, driver behavior, real-time vehicle health, and accident risks, providing predictive warnings and emergency alerts.
